

## Advances in Application Payment System 2024

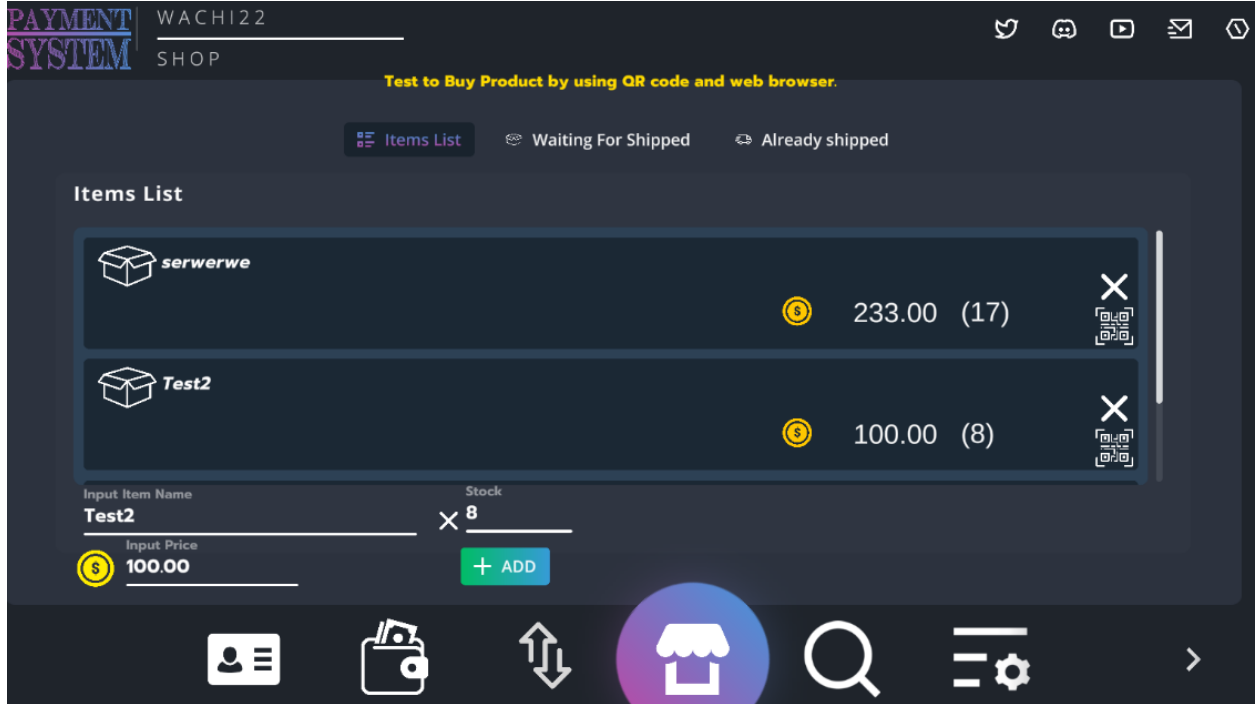

Improve the UI of the application to be compatible with all platforms. and every plane, both portrait and landscape.

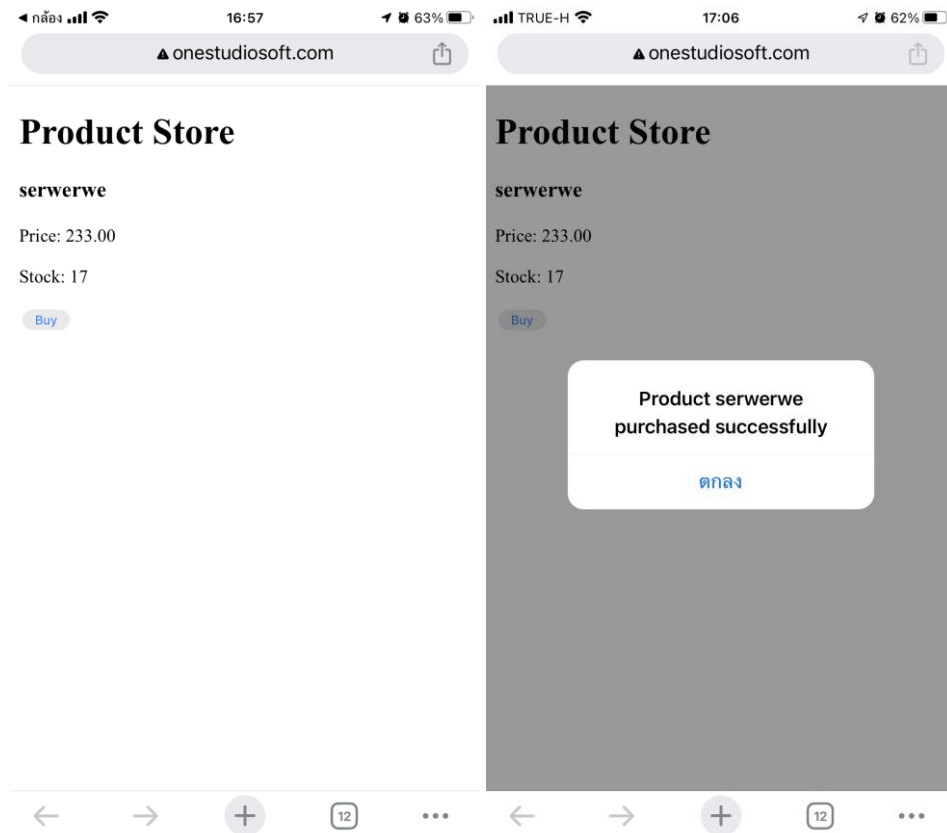

Add a store creation system In the future, it will be connected to the app's payment system. At this time it has the following features:

- Create product lists and set prices

- Able to create QR Code to attach to products to link to the trading system of the application.

The QR scanned sample enters the prototype screen for use in purchasing the product. If you press to buy, there will be adjustments to stock information in the application's database.

The next step in development is to sync the app's system with the Stripe application through the Stripe API.
